DHEENA DHAYALAN A

Site Reliability Engineer | Cloud Infrastructure & Automation | Observability & Incident Management

Chennai, India | +91 75023 99148 | deenadayalan779@gmail.com | linkedin.com/in/dheenadhayalan779

PROFESSIONAL SUMMARY

Site Reliability Engineer with 3 years of experience driving high availability, production observability, and incident response for high-traffic cloud platforms. Skilled in defining and tracking SLIs/SLOs, tuning alerting thresholds, and leading root cause analysis (RCA) to reduce MTTD/MTTR across distributed AWS environments. Hands-on with Infrastructure as Code (Terraform, Ansible), CI/CD pipeline validation, and automation scripting (Python, Bash) to reduce toil and improve deployment reliability. Recognised with a CEO-level Team Excellence Award for zero critical outages during ACC 2025 live cricket streaming, supporting millions of concurrent users. Brings additional cross-functional strength in SIEM-based security monitoring and log pipeline engineering from SOC operations, adding a security-conscious lens to infrastructure reliability work.

CORE SKILLS & TECHNOLOGIES

- **Site Reliability & Incident Management:** SLA Definition & Tracking, Error Budgets, Incident Triage & On-Call Support, Root Cause Analysis (RCA), Escalation Management, High Availability.
- **Cloud & Infrastructure:** AWS (EC2, VPC, S3, RDS, IAM, ELB/ALB, Route 53, Auto Scaling, CloudWatch),
- **Observability & Monitoring:** Grafana, Datadog, Coralogix, CloudWatch, Squad cast, Alert Threshold Tuning, Log Aggregation & Analysis, Dashboarding & Metrics Visualization
- **CI/CD & Automation:** CI/CD Pipeline Validation, Hotfix/Release Deployment Support
- **Systems & Networking:** Linux (CLI) Administration, Windows Server, DNS, Load Balancing, Web Servers (IIS, Apache Tomcat)
- **Security (Supporting Background):** IAM, SSL/TLS Certificates, AWS WAF, SIEM Tools
- **Tools:** Postman, ServiceNow, JIRA, Blitz, Bolt Service.

PROFESSIONAL EXPERIENCE

Cloud Kinetics Technology Solutions Private Limited — Chennai

Site Reliability Engineer — Sony LIV OTT Platform *(Sep 2023 – Present)*

Production Monitoring & Observability

- Monitored AWS production infrastructure for a high-traffic OTT platform serving millions of concurrent users by tracking EC2, RDS, ELB, and CDN health in real time using Grafana, Datadog, Coralogix, and CloudWatch — reducing mean time to detect (MTTD) for anomalies.
- Tuned alert thresholds for API errors, latency, and infrastructure anomalies by analyzing historical baselines in Datadog, cutting false-positive alert noise by ~40% and enabling faster P1 triage.
- Built and maintained real-time observability dashboards covering traffic patterns, API success rates, and infra metrics, giving engineering teams a single pane of glass for production health and informal SLI tracking.

Incident Management & Reliability

- Led end-to-end incident triage for production outages — querying Coralogix and Datadog logs to isolate root cause, coordinating with Dev/QA, and delivering RCA and postmortem documentation — reducing mean time to resolve (MTTR) for recurring failure patterns.
- Diagnosed playback failures, subscription flow breaks, and API latency spikes by correlating log traces with player metrics (buffering, bitrate, stream quality), enabling targeted hotfixes that restored service within SLA windows.
- Escalated critical application bugs with structured evidence (log excerpts, trace IDs, timelines) to development teams, accelerating fix validation cycles across deployment sprints.

Deployment, Automation & Infrastructure

- Supported hotfix and release deployments as SRE on-call by performing post-deployment sanity checks — validating API responses, login flows, player functionality, and subscription services — ensuring zero-regression go-lives.

- Performed manual and Auto Scaling of EC2 instances during high-concurrency streaming events (e.g., ACC 2025 cricket), maintaining sub-500ms API response times under traffic spikes of 3–5× baseline, and contributing to capacity planning for future peak events.
- Managed SSL certificate renewals, IAM role audits, and AWS WAF rule reviews, maintaining compliance and eliminating certificate expiry incidents across production services.

Key Achievement: Recipient of Team Excellence Award with CEO Appreciation for ensuring platform reliability during ACC 2025 live cricket streaming — sustaining high availability for millions of concurrent users with zero critical outages.

CERTIFICATIONS

- Microsoft Azure Fundamentals — AZ-900
- ServiceNow Certified System Administrator — CSA
- ITSM with Jira Service Management — ACA-910
- CompTIA Security+

EDUCATION

- B.Tech in Information Technology — Kingston Engineering College | 2018–2022 | CGPA: 8.1/10
- Higher Secondary Certificate (HSC) — 2018 | 65%
- Secondary School Leaving Certificate (SSLC) — 2016 | 81.6%
